Description within 200 words

Nirmala College of Commerce, located within the Brihanmumbai Municipal Corporation (BMC) area, adheres to a comprehensive waste management system that addresses various waste types, including solid waste, liquid waste, e-waste, and water recycling. The institute does not generate or use hazardous chemicals or radioactive materials. Solid waste management is integrated into the BMC system, which efficiently handles sewage and domestic waste. Nirmala College of Commerce has established a well-organized sewage management system, featuring proper procedures. Domestic waste is collected daily by BMC vehicles, while the institute ensures waste segregation at every floor, using designated bins for dry and wet waste. The collected waste is then handed over to the BMC for further treatment, contributing to a sustainable waste management process.

Liquid waste, primarily consisting of sewage/blackwater, is managed through a well-maintained pipeline system within the college, which connects to the BMC's Liquid Waste Management System. The waste is treated at BMC's dedicated plant.

Water conservation and recycling are key components of the institute's sustainability efforts. A rainwater harvesting system efficiently collects and stores rainwater for use in washrooms and gardening. The institute also promotes water conservation through awareness campaigns. Overall, Nirmala College of Commerce showcases a holistic approach to waste management, emphasizing environmental sustainability and responsible resource management.
