Report of activities for the implementation of green campus

Report on Activities for the Implementation of Green Campus at Nirmala College of Commerce

The primary goal of implementing a green campus at Nirmala College of Commerce is to foster environmental sustainability, reduce the ecological footprint, and create a healthier, more eco-friendly space for students, staff, and visitors.

Activities Undertaken:

1. **Ban on Plastic Usage:** The College has implemented a strict ban on plastic across the campus to minimize plastic waste and encourage the use of eco-friendly alternatives. To raise awareness, workshops and seminars have been conducted to educate the campus community about the environmental hazards of plastic and the importance of using biodegradable products.
2. **Tree Plantation Drives:** Regular tree plantation drives are organized within the campus to increase green cover. These efforts help reduce air pollution and contribute to a cooler, more pleasant environment.
3. **Potted Plants and Indoor Greenery:** The College has incorporated a variety of potted plants across common areas, classrooms, and corridors. These plants enhance the aesthetic appeal, purify the air, and promote a calming atmosphere. Students and staff are encouraged to take care of the plants, fostering a sense of responsibility for the environment.
4. **Waste Management:** To promote a clean and sustainable environment, the college has set up waste segregation bins across the campus. This initiative encourages students and staff to separate dry and wet waste.
5. **Awareness Campaigns and Educational Programs:** The college organizes various programs, including workshops, seminars, and student-led campaigns, to raise awareness about environmental conservation. Topics such as energy conservation, water management, and sustainable practices are covered to engage the campus community in green initiatives.
6. **Water Conservation Measures:** The College has implemented water conservation practices such as rainwater harvesting systems and water-efficient fixtures in restrooms and other facilities. These efforts help reduce water wastage and ensure sustainable usage of resources.
7. **Energy Efficiency Measures:** The College has adopted energy-saving initiatives such as using LED lights, optimizing the use of air conditioning, and encouraging the use of natural light in classrooms and offices. These measures help reduce energy consumption and minimize the carbon footprint in the campus.
